

From Minimal Digital Footprint to a Multi-Channel Acquisition Engine

LFL digital growth case study based on GA4 performance exports through March 2026, enhanced with an audience and geographic snapshot through August 11, 2026, plus acquisition, SEO, AI referral visibility and a Top 100 landing-page appendix.

Executive Summary

- **A measurable digital presence was built from an early-stage starting point.** GA4 recorded **30,000 sessions**, **12,498 active users** and **4,087 new users** over the available reporting period.
- **SEO became a meaningful acquisition asset alongside paid media.** Organic search contributed approximately **7,510 tracked sessions** and **1,241 new users**. Organic-search users also recorded **62.7s average engagement time**, versus 36.1s for Paid Search.
- **New-user acquisition reached a much higher operating level in late 2025 and early 2026.** March 2026 recorded **457 new users**, up **4.3%** from February and far above the very small March 2025 base.
- **The site began earning traffic from AI discovery platforms.** ChatGPT, Perplexity, Gemini, Claude, Copilot and

DeepSeek sources contributed approximately **482 sessions**, providing early evidence of visibility beyond traditional search.

- **Geographic reach expanded well beyond the UAE.** The updated user-attributes export records **5,318 active users from the UAE**, alongside 1,363 from the United States, 1,004 from China, 862 from Pakistan and 704 from India through August 11, 2026.

Monthly Growth: New-User Acquisition Recovered in March

March 2026 improved to 457 new users from 438 in February, a **4.3% month-over-month increase**. The broader trend shows the site moving from a very small acquisition base into sustained monthly volumes in the hundreds during late 2025 and early 2026.

Largest recent acceleration

October → November 2025

New users increased from **184** to **761**, a **313.6%** jump in GA4-recorded acquisition.

Recent pressure point

January → February 2026

New users declined from **652** to **438** (-32.8%), before returning to growth in March.

Channel Performance: Paid Delivered Scale, Organic Built an Owned Growth Base

Paid media was the largest traffic driver, while organic search became the second-largest tracked session channel. This is a useful portfolio outcome under budget constraints because SEO created a continuing acquisition source that does not require a media cost for every visit.

CHANNEL	SESSIONS	SHARE OF 30,000 SESSIONS
Paid	16,801	56.0%
Organic Search	7,510	25.0%
Direct	3,584	11.9%
Referral	1,589	5.3%
Other / Unclassified	410	1.4%

Organic Search accounted for 1,241 new users, about 30.4% of all new users. Organic engagement time was 74% higher than Paid Search on the acquisition report (62.7s vs 36.1s), suggesting that SEO/content traffic was not only adding volume but attracting visitors who spent more time engaged.

Traffic Sources Show Search Visibility and Emerging AI Discovery

Google paid and Google organic were the dominant sources, followed by direct traffic. Importantly for a modern search portfolio, the source export also contains meaningful visits from ChatGPT and Perplexity, plus smaller volumes from Gemini, Claude, Copilot and DeepSeek.

SOURCE / MEDIUM	SESSIONS
google / cpc	16,730
google / organic	6,845
(direct) / (none)	3,584
bing / organic	562
(data not available)	254
facebook.com / referral	217
chatgpt.com / referral	210
uaebusinessconsultant.com / referral	187
chatgpt.com / (not set)	131
perplexity.ai / referral	83

AI visibility is already measurable

Approximately **482 sessions** were attributed to major AI/answer-engine sources in the export. This is roughly **1.6%** of total sessions and creates a strong foundation for future GEO/AEO work.

Geographic Reach: Strong UAE Base with Global Visibility

The updated GA4 user-attributes export confirms the UAE as the core market with 5,318 active users, while also showing substantial international reach. The United States contributed 1,363 active users, China 1,004, Pakistan 862, India 704, Iraq 459 and the United Kingdom 440. This demonstrates that LFL's content and acquisition footprint was discoverable beyond its home market.

Extended audience snapshot: January 15, 2024 to August 11, 2026. This section is more current than the core performance exports, which end March 31, 2026. The country file contains 166 country/territory codes and 13,950 summed active-user rows.

RANK	COUNTRY	GA4 COUNTRY CODE	ACTIVE USERS
1	United Arab Emirates	AE	5,318
2	United States	US	1,363
3	China	CN	1,004
4	Pakistan	PK	862
5	India	IN	704
6	Iraq	IQ	459
7	United Kingdom	GB	440

Within the UAE, Dubai remained the largest city with 3,131 active users, followed by Sharjah (689), Abu Dhabi (686) and Ajman (641). International city visibility included Amman, Lahore, London, Karachi, Singapore, Cape Town, Islamabad and Baghdad.

RANK	CITY	ACTIVE USERS
1	Dubai	3,131
2	Sharjah	689
3	Abu Dhabi	686
4	Ajman	641
5	Amman	362
6	Lahore	244
7	London	215
8	Karachi	204
9	Singapore	190
10	Cape Town	144
11	Islamabad	116
12	Al Ain	111
13	Baghdad	106
14	Shanghai	84
15	New York	82

Geography reflects GA4 user-attribute reporting, not verified customer or lead location. Some traffic can represent visitors, infrastructure, VPNs or automated activity, so this section is presented as website reach rather than qualified demand.

Audience Profile: Business-Relevant, International and Search-Oriented

The available audience attributes align well with a B2B company-formation and international-business content strategy. Among users for whom GA4 reported age, **83.6% were 18-44**, with the 25-34 segment the largest at 1,071 active users. Google-signals interest data also surfaces Technophiles, Avid Investors, Travel Buffs, Avid Business News Readers and Business Professionals among the leading interest groups.

Age and gender are privacy-thresholded demographic dimensions in GA4 and cover only the subset for whom those attributes were available. Percentages above use the known-age subset, not all site users.

Language Reach Supports International Content Discovery

English dominated the language dimension with **10,856 active users**, followed by Arabic (1,075) and Chinese (926). Russian, Ukrainian and French also appear in the leading language groups, reinforcing the international nature of the site's reach.

RANK	LANGUAGE	ACTIVE USERS
1	English	10,856
2	Arabic	1,075
3	Chinese	926
4	Russian	267
5	Ukrainian	103
6	French	94
7	Spanish	50
8	German	36
9	Indonesian	21
10	Turkish	19

Interest Signals Match Commercial and Information-Seeking Audiences

Technology, finance/investing, travel and business-news interests appear prominently in the Google-signals audience subset. These are directionally relevant to international company setup, relocation and

commercial-services content, but they should be treated as audience signals rather than deterministic user identities.

RANK	REPORTED INTEREST	ACTIVE USERS
1	Technology/Technophiles	765
2	Banking & Finance/Avid Investors	632
3	Lifestyles & Hobbies/Shutterbugs	608
4	Travel/Travel Buffs	579
5	News & Politics/Avid News Readers	460
6	News & Politics/Avid News Readers/Avid Business News Readers	400
7	Technology/Mobile Enthusiasts	393
8	News & Politics/Avid News Readers/Entertainment News Enthusiasts	388
9	Lifestyles & Hobbies/Business Professionals	379
10	Technology/Social Media Enthusiasts	344

Content and Landing Pages Created

Multiple Search Entry Points

Traffic is distributed across high-intent business setup, licensing, visa, banking, tax and sector-specific content. That breadth matters because it shows an acquisition strategy built around multiple customer questions instead of relying on a single homepage or campaign landing page.

The top 100 landing pages generated 9,961 sessions, representing 92.8% of sessions in the landing-page export. The complete Top 100 ranking is included in the appendix for portfolio review.

LANDING PAGE	SESSIONS	NEW USERS	AVG. ENGAGEMENT / SESSION
/bvi-company-formation-in-the-uae	465	27	21.1s
/uae-business-visa-guide-2025	425	43	32.2s
/holding-company-formation-in-dubai-uae-2025-guide	389	52	38.4s
/how-to-start-a-gym-fitness-center-business-in-dubai	381	61	35.5s
/how-to-get-a-holiday-home-license-in-dubai-uae	373	34	38.7s
/how-to-start-a-food-business-in-dubai-2025	360	38	31.4s
/uae-freezone-business-formation	279	4	11.3s
/how-to-start-a-transport-company-in-dubai	262	57	32.6s

Note: the landing-page export totals fewer sessions than the report snapshot, so landing-page figures are used for ranking pages within that export, not for reconciling total site sessions.

Conversions and Measurement: Strong Activity, but Lead Tracking Needs Refinement

The acquisition export records **48,861 key events**, but these should **not** be presented as 48,000+ sales leads. The dedicated “Generate leads” export reports zero values for both qualified and converted leads across the period, while many pages show unusually high session key-event

rates. Together, these indicate that generic interactions were likely configured as key events and lead-stage events were not populated in this export.

Portfolio-safe interpretation

Use key events as evidence that GA4 interaction tracking existed, but present lead generation separately using CRM/form/WhatsApp data when available. This makes the case study more credible and prevents inflated conversion claims.

Growth Constraints and Opportunities Identified

1. **Limited media and resource capacity constrained scale.** Paid sessions show that demand could be generated, but growth could have been amplified with a larger and more consistent budget plus additional content/design/development support.
2. **Lead-event taxonomy needs cleanup.** Qualified and converted lead events were not populated, preventing a reliable GA4 lead conversion rate.
3. **Organic social contribution was minimal in GA4.** This creates room to build a stronger social-to-site acquisition loop rather than relying mainly on search and direct traffic.
4. **Monthly reporting coverage is incomplete in the supplied exports.** New users have a daily date series, while sessions, engagement rate, engaged sessions and key events are exported only as cumulative totals.
5. **Attribution hygiene can be improved.** Internal/testing and miscellaneous referral sources appear in the source list, so exclusions and UTM governance would improve reporting clarity.

Five Actionable Recommendations

- 1. Scale the SEO content clusters that already attract traffic.**
Expand company formation, sector licensing, tax, banking, visa and “how to start” topic clusters; refresh 2024/2025 URLs into evergreen or 2026 versions and strengthen internal linking to service pages.
- 2. Formalize GEO/AEO as a growth channel.** Optimize entity signals, expert-led answers, structured FAQs, citations, schema and highly quotable service content to build on the existing 482 AI-referred sessions.
- 3. Rebuild conversion measurement around business outcomes.**
Configure distinct events for form submit, qualified lead, WhatsApp lead, call lead, booked consultation and closed/converted lead, then connect GA4 reporting to CRM outcomes.
- 4. Use paid media selectively around high-intent themes.**
Prioritize keywords and landing pages with strong organic engagement, reduce low-quality spend, and use paid search to accelerate service areas where organic rankings are still developing.
- 5. Create a repeatable monthly management dashboard.** Export or connect monthly users, sessions, engaged sessions, engagement rate, key events, lead stages, channel mix, landing pages and cost metrics so month-over-month and year-over-year performance can be reported without metric gaps.

Additional portfolio opportunity: use the confirmed country and language footprint to prioritize UAE-first localization, Arabic service content, and market-specific pages for high-visibility international audiences such as the US, Pakistan, India, Iraq and the UK.

Portfolio Positioning

Suggested case-study headline: "Built LFL's digital acquisition foundation from an early-stage online presence, generating 30,000 GA4 sessions, 12,498 active users and 7,500+ organic-

search sessions through March 2026, while expanding measurable website visibility across the UAE and international markets and attracting traffic from Google, referral partners and emerging AI discovery platforms."

This framing focuses on what was built, the measurable acquisition created, and the efficiency of developing organic visibility alongside paid media. It avoids claiming revenue or lead outcomes that the supplied GA4 exports cannot independently verify.

Appendix: Top 100 Landing Pages

This appendix ranks the 100 highest-traffic landing pages in the supplied GA4 landing-page export. Together they account for **9,961 of 10,734 landing-page sessions (92.8%)**.

Key events are shown exactly as configured in GA4 and should not be interpreted as qualified leads without event-taxonomy validation.

Measurement Notes

Period: January 1, 2024 to March 31, 2026. **Source files:** Reports snapshot, Generate leads overview, User acquisition by first-user primary channel group, and Landing page report. Monthly new-user figures were reconstructed from the GA4 daily “Nth day” series. Other requested monthly metrics were not supplied with a date dimension, so they are presented cumulatively rather than estimated. Source/medium rows account for 29,896 of the 30,000 reported sessions. **Audience attributes:** User attributes overview, January 15, 2024 to August 11, 2026, used only for geography, language, age, gender and interest sections. Age, gender and interests have partial/privacy-thresholded coverage and are not reconciled to the full active-user total.

Prepared as a portfolio-oriented GA4 performance case study. All figures are derived from the supplied exports; interpretation is intentionally positive while retaining measurement caveats needed for credibility.
