

PORTFOLIO CASE STUDY | GOOGLE ANALYTICS 4

LF Legal Digital Growth & SEO Performance

How organic search, high-intent legal content and a diversified digital footprint built measurable acquisition for a London law firm with minimal dependence on paid media.

GA4 period: January 15, 2024 to August 11, 2026

Executive Summary

- A meaningful digital acquisition engine was established: GA4 recorded 27,767 sessions, 22,476 active users, 20,996 new users and 10,894 engaged sessions.
- SEO was the strongest quality channel: Organic Search generated 11,392 sessions (41.0% of all sessions), but contributed 64.3% of all engaged sessions and 68.3% of recorded key events.
- Growth was achieved with almost no paid-search dependency: only 54 Paid Search sessions were recorded, less than 0.2% of total traffic.
- 2026 acquisition accelerated: July reached 1,683 new users, up 46.2% from June and 178.6% from January.
- AI discovery became measurable: at least 269 sessions were identifiable from ChatGPT, Gemini, Claude, Copilot and Perplexity sources.

SESSIONS 27,767 All channels	ACTIVE USERS 22,476 GA4 property total	NEW USERS 20,996 Acquisition total
ORGANIC SESSIONS 11,392 41.0% of sessions	ENGAGED SESSIONS 10,894 39.2% overall engagement	RECORDED KEY EVENTS 63 43 from Organic Search

Portfolio takeaway: LF Legal demonstrates an organic-first growth model. Search traffic did not simply add visits. It delivered materially stronger engagement and the majority of tracked high-value actions while paid search remained negligible.

2026 Growth Momentum

New-user acquisition nearly tripled between January and July 2026. New users increased from 604 in January to 1,683 in July, a 178.6% increase. Active users rose from 682 to 1,797 (163.5%), while returning users increased from 131 to 257 (96.2%).

July 2026

1,683 new users

46.2% higher than June, with 257 returning users also recorded.

Data discipline

Complete months only

August 2026 is partial through August 11 and is intentionally excluded from the month-over-month growth claim. Large historical spikes in June and August 2025 are treated as anomalies rather than used to strengthen the portfolio story.

Acquisition Mix: Organic Search Delivered the Highest-Quality Scale

Direct traffic was the largest source of raw sessions, but Organic Search was much stronger on engagement. Organic generated 11,392 sessions and 7,003 engaged sessions at a **61.5% engagement rate**, compared with Direct at 22.8%.

CHANNEL	SESSIONS	ENGAGED SESSIONS	ENGAGEMENT RATE	AVG. ENGAGED TIME/SESSION	KEY EVENTS
Direct	13,567	3,089	22.8%	12.5s	18
Organic Search	11,392	7,003	61.5%	54.6s	43
Unassigned	1,511	90	6.0%	12.8s	0
Referral	655	394	60.2%	53.7s	1
Organic Social	534	293	54.9%	34.0s	0
Paid Search	54	5	9.3%	1.1s	0
AI Assistant	51	20	39.2%	24.7s	1
Cross-network	3	0	0.0%	0.0s	0

Organic accounted for 64.3% of all engaged sessions and 68.3% of all recorded key events. Average engagement time per Organic Search session was 54.6 seconds, more than four times Direct's 12.5 seconds.

SEO Content Became a High-Intent Acquisition Engine

Immigration and settlement content is the clearest organic growth theme in the landing-page data. Guides on ILR, Skilled Worker visas, good-character requirements, continuous residence and Innovator Founder visas attracted users with high engagement and repeated key-event activity.

landing page	sessions	new users	avg. engagement	key events	session key-event rate
/britain-ilr-in-2026-your-complete-guide-to-uk-settlement	763	694	65.3s	5	0.5%
/skilled-worker-visa-uk-requirements-2026-the-definitive-guide-for-applicants	404	357	33.9s	6	1.2%
/good-character-requirement-for-uk-citizenship-2026-comprehensive-guide	320	277	81.6s	5	1.6%
/appendix-continuous-residence-the-essential-guide-to-uk-ilr-requirements-2026	222	201	63.0s	3	1.4%
/innovator-founder-visa-requirements	217	186	35.1s	2	0.9%
/expert-uk-innovator-founder-visa-lawyer-the-2026-guide-for-entrepreneurs	61	53	92.0s	6	8.2%
/legal-services-in-london/immigration	56	41	37.9s	1	1.8%
/legal-services-in-london/litigation-and-dispute-resolution	45	20	33.9s	2	2.2%

Strongest efficiency signal: the 2026 expert Innovator Founder visa lawyer page recorded 61 sessions, 92.0 seconds average engagement and 6 key events, producing an 8.2% session key-event rate in the export. This is a small-volume page, so it is best treated as a high-potential content/service page rather than a final conversion benchmark.

The Top 100 landing pages generated **19,072 sessions**, or **68.5%** of the entire landing-page export. The appendix lists all 100 so the case study can demonstrate both traffic concentration and content breadth.

Search Visibility Extended Beyond Google

Google Organic generated 8,929 sessions and Bing Organic generated 1,928. Additional discovery came through Yahoo, DuckDuckGo, Ecosia and other sources, reducing dependence on a single search ecosystem.

SOURCE / MEDIUM	SESSIONS
(direct) / (none)	13,567
google / organic	8,929
bing / organic	1,928
linkedin.com / referral	365
uk.search.yahoo.com / referral	222
lawfirmuk.net / referral	176
facebook.com / referral	123
duckduckgo / organic	70
chatgpt.com / (not set)	67
yandex.ru / referral	66
google / cpc	54
chatgpt.com / referral	52
yahoo / organic	35
gemini.google.com / referral	34
ecosia.org / organic	29
getautoseo.com / referral	29
reviewsolicitors.co.uk / referral	29
cn.bing.com / referral	28

Organic search is multi-engine: Google remains dominant, but Bing alone contributed nearly 2,000 sessions, supporting broader search visibility.

AI Search Visibility Is Already Measurable

GA4 source/medium rows identify approximately **269 sessions** from major AI and answer-engine platforms. ChatGPT was the largest identifiable source, followed by Gemini, Claude, Copilot and Perplexity.

Why this matters for the portfolio: this gives direct evidence that LF Legal content is being discovered through AI-mediated journeys, not just traditional SEO. It creates a credible foundation for GEO/AEO work such as expert-answer content, citation-ready pages, entity reinforcement, FAQs and structured legal explanations.

The GA4 default channel group classifies only 51 sessions as "AI Assistant". The 269-session figure above uses identifiable AI platform names across the source/medium export and therefore captures a broader set of AI-origin visits.

Geographic Reach: UK-Led with International Demand Signals

The United Kingdom is the strongest clearly addressable market, with 7,926 active users. The property also recorded users from the United States, Singapore, Russia, China, Hong Kong, the UAE and India. London is the dominant city with 3,954 active users.

Top countries

COUNTRY	CODE	ACTIVE USERS	NOTE
United Kingdom	GB	7,926	
Germany	DE	7,852	Validate anomaly
United States	US	1,644	
Singapore	SG	731	
Russia	RU	540	
China	CN	467	
Hong Kong	HK	361	
UAE	AE	243	
India	IN	239	
Vietnam	VN	206	
Brazil	BR	189	
France	FR	95	

Top cities

CITY	ACTIVE USERS
London	3,954
Singapore	520
Cardiff	322
Moscow	265
Hong Kong	263
Manchester	247
Birmingham	241
Dubai	186
Columbus	135
Lanzhou	133
Norwich	133
Wolverhampton	127

Validation note: Germany records 7,852 active users, nearly matching the UK, but the city distribution does not show a corresponding German concentration and historical traffic includes sharp spikes. This should be validated before presenting Germany as genuine market demand.

Audience Language Supports a Multilingual Legal Proposition

English accounts for **20,694 active users (92.1% of all active users)**. Chinese and Russian are the next-largest recorded language groups, with smaller Ukrainian, French, Spanish, Portuguese, German and Arabic audiences also present.

LANGUAGE	ACTIVE USERS
English	20,694
Chinese	631
Russian	615
French	66
Ukrainian	54
Spanish	51
Portuguese	45
German	31
Arabic	30
Turkish	26

LF Legal's current public website describes a multilingual legal service offering and lists support across English, Ukrainian, Russian, Hindi, Urdu, Punjabi, Mandarin Chinese, Romanian, Hebrew and Turkish. The GA4 language mix is directionally consistent with an internationally oriented client proposition.

Age, gender and interest dimensions cover only a small subset of total users, so they are not used for headline portfolio claims.

Analytics Surfaced Clear Technical SEO Opportunities

A strong portfolio does not hide measurement problems. The GA4 data identifies several issues that can be turned into optimization work:

1. Legacy 404 traffic

The "Page Not Found - LF Legal" title recorded **5,710 views** from 5,569 active users with a **93.6% bounce rate**. Redirect mapping, broken backlink recovery and internal-link cleanup could reclaim meaningful search equity and user journeys.

2. Landing-page attribution gap

"(not set)" accounts for **2,589 sessions** with only 3.7 seconds average engagement. This should be investigated for tracking, consent, redirect or session-start issues.

3. Revenue and lead-stage tracking

GA4 contains 63 key events, but revenue and transaction fields are zero. Portfolio claims therefore use "recorded key events" rather than calling them sales or confirmed leads. Connecting form, phone, WhatsApp and CRM stages would make commercial attribution much stronger.

4. Historical anomaly review

June and August 2025 show unusually large new-user spikes, and Germany has an atypically high audience count. Both should be validated before being used in performance claims.

Five Actionable Growth Recommendations

1. **Scale the immigration content clusters that already work.** Build stronger internal-link paths from ILR, Skilled Worker, citizenship, continuous residence and Innovator Founder guides into consultation and service pages, and refresh them rapidly when Home Office rules change.
2. **Recover technical SEO value from legacy 404s.** Export the most-viewed 404 URLs, map them to relevant live pages, implement 301 redirects, repair internal links and reclaim external backlinks where possible.
3. **Formalize GEO/AEO as a tracked acquisition channel.** Create expert-authored answer pages, concise legal definitions, structured FAQs, schema and citation-ready content around the questions already attracting ChatGPT, Gemini, Claude, Copilot and Perplexity traffic.
4. **Connect analytics to business outcomes.** Distinguish consultation form submits, phone calls, WhatsApp enquiries, qualified leads, retained clients and matter value, then connect GA4 events to CRM stages.
5. **Improve attribution and international content governance.** Clean up "not set" and internal referrals, enforce UTM standards, validate anomalous country traffic, and use multilingual demand data to prioritize genuinely valuable language and market pages.

Portfolio Achievement Statement

Digital growth portfolio highlight: Strengthened LF Legal's organic acquisition engine to **27.8K GA4 sessions** and **22.5K active users**, with SEO contributing **41% of sessions**, **64% of engaged sessions** and **68% of recorded key events** while Paid Search represented less than 0.2% of traffic. High-intent immigration content helped new-user acquisition reach **1,683 in July 2026**, nearly 2.8x January, while measurable referral traffic emerged from ChatGPT, Gemini, Claude, Copilot and Perplexity.

Business context

LF Legal is an SRA-regulated London legal practice offering services across immigration, company commercial, employment, family law, litigation, debt recovery, intellectual property and related legal matters. The current website emphasizes service to both UK and international clients and a multilingual team.

Public context checked August 12, 2026: LF Legal website (lflegal.uk) and Solicitors Regulation Authority organisation record for SRA ID 639148. Performance metrics in this case study come from the supplied GA4 exports and cover January 15, 2024 to August 11, 2026.

Appendix: Top 100 Landing Pages

Ranked by sessions. These 100 rows account for 19,072 of 27,859 landing-page sessions (68.5%). Long URLs are retained to make the appendix auditable.
